gastric inhibitory polypeptide receptor - hamster
NyAlternate names: GIP receptor
C;Species: Cricetinae gen. sp. (hamster)
C;Dape: 15-Feb-1995 #sequence_revision 05-Apr-1995 #text_change 20-Jun-2000
C;Accession: JC2462
R;Yasuda, K.; Inagaki, N.; Yamada, Y.; Kubota, A.; Seino, S.; Seino, Y.
Biochem. Biophys. Res. Commun. 205, 1556-1562, 1994
A;Title: Hamster gastric inhibitory polypeptide receptor expressed in pancreatic islets a A;Reference number: JC2462; MUID:95110292; PMID:7811236
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           3.0%;

Molecular cloning of the gene encoding the mouse parathyroid
hormone/parathyroid hormone-related peptide receptor.";
Proc. Natl. Acad. Sci. U.S.A. 91:5051-5051(994).
-!- FUNCTION: This is a receptor for parathyroid hormone and for
parathyroid hormone-related peptide. The activity of this receptor
is mediated by g proteins which activate adenyly! cyclase and also
a phosphatidylinositol-calcium second messenger system.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- SIMILARITY: Belongs to the G-protein coupled receptor 2 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     related

"A mutant PTH/PTHYP type I receptor in enchondromatosis.";

I. Genet. 30:306-310(2002).

-I- FUNCTION: This is a receptor for parathyroid hormone and for parathyroid hormone-related peptide. The activity of this receptor is mediated by g proteins which activate adenylyl cyclase and also a phosphatidylinositol-calcium second messenger system.

-I- SUBCELLULAR LOCATION: Integral membrane protein.

-I- TISSUB SPECIFICITY: Expressed in most tissues. Most abundant in kidney, bone and liver.

-I- DISEASE: Defects in PTHRI are the cause of Jansen's metaphyseal chondrodysplasia (MDC) [MINI-156400]. UMC is a rare autosomal dominant disorder characterized by a short-limbed dwarfism
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This SWISS-PROT entry is copyright. DISEASE: Defects in PTHR1 can be a cause of enchodromatosis
DISEASE: Defects in PTHR1 can be a cause of enchodromatosis
(MIM:166000). Enchondromas are common benign cartilage tumors of
bone. They can occur as solitary lesions or as multiple lesions in
enchondromatosis (Ollier and Maffucci diseases). Clinical problems
caused by enchondromas include abkoletal deformity and the
potential for malignant change to osteosarcoma.
SIMILARITY: Belongs to the G-protein coupled receptor 2 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             "Constitutive activation of the cyclic adenosine 3',5'-monophosphate signaling pathway by parathyroid hormone (PTH)/PTH-related peptide receptors mutated at the two loci for Jansen's metaphyseal
                                                                                                                                                                                                                                                                                                                                 CHARACTERIZATION OF VARIANTS JMC ARG-223 AND PRO-410.

Biophys. Acta 1307:339-347(1996).

-!- FUNCTION: This is a receptor for parathyroid hormone and for parathyroid hormone-related peptide. The activity of this receptor is mediated by 9 proteins which activate adenylyl cyclase and also a phosphatidylinositol-calcium second messenger system (By

    sumilarity!
    SUBCELLULAR LOCATION: Integral membrane protein.
    SIMILARITY: Belongs to the G-protein coupled receptor 2 family.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         MEDLINE-96305358; PubMed-8688470; DOI=10.1016/0167-4781(96)00035-8; Black E.C., Smith D.P., Zhang X.Y., Frolik C.A., Harvey A., Chandrasekhar S., Haiung H.M. "A G protein-linked receptor for parathyroid hormone and parathyroid
hormone-related peptide.";
Science 254:1024-1026(1991).
-!-FUNCTION: This is a receptor for parathyroid hormone and for
parathyroid hormone-related peptide. The activity of this receptor
is mediated by g proteins which activate adenylyl cyclase and also
a phosphatidylinositol-calcium second messenger system.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- SIMILARITY: Belongs to the G-protein coupled receptor 2 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
